

Enter the new era of dental care.

THE GOA DENTAL STUDIO

INTRODUCTION

WELCOME TO GOA!!!

As you holiday in Goa, our Dentists take complete care of your dental and Oral health needs.

Walking into Goa Dental Studio, you can expect to get the complete undivided attention of one or more of our well qualified Dentists who shall ensure keen understanding of your current needs and desires, by giving your visit undivided attention and ensure the complete assimilation of your previous dental condition and treatment history, to give your a smile you always desired and peace of mind, like never before.

Precision, Quality, Unparalleled Aesthetics, Reliability, Consistent Shade Match and characterization translating into work that equals global standards in comprehensive Dentistry.

In an effort to make Goa Dental Studio, a completely reliable affair for our clients who arrive on a very tight-time schedule, we have a special tie up with one of the leading Dental labs of Goa The "D'Art Dental Ceramics". This will not fail to amaze you by the speed of delivery and bullet-proof reliability of final results both functionally as well as aesthetically. 'In about half the time taken by other leading dental set ups.'

The Surgery is fully equipped with latest facilities and amenities which ascribe to international trends. For e.g.: Six-tier "dead-sure" Sterilization Protocol, Digital X-ray,

Intra-oral imaging, "tooth in an hour" implant system using the Noble Guide. ETC. This all translates that the Goa Dental Studio is nothing short of most complete dental health care centre one can hope to find.

PRODUCT RANGE

The Porcelain Fused to Metal Range

Duceram Plus Standard and 3D options- Vita A1 to D4 Shades, full coverage layering on Beryllium free Nickel-Chromium or Cobalt-Chromium Copings / Frameworks. The 3D variant for the more demanding client; built-up using life like special ceramic powders. Highly fluorescent, opalescent effects to give close to nature looks - available in 16 Vita lumin A1 - D4 Shades and also Vita 3D Master (29) Shades with true to life nuances in the affordable price bracket.

IPS D'Sign Standard and Artistry Excellence: the popular Fluor-Apatite Lucite Glass Ceramic globally popular for its aesthetic appeal and its kindness to the opposing enamel. Layered on non-precious metal framework, usually the Alloy-29 chrome-cobalt from D'Sign. You can choose between Beryllium free Ni-Cr or Cobalt Cr copings / frameworks. D'Sign Artistry Excellence is the variant for the most demanding client, with steep aesthetic demands. Arguably the best Metal-Ceramic restorations money can buy. Built-up using at least 10 different powders, as many as 16 to 20 powders for most realistic effects. Mind-Boggling realism.

Gold Plating / Coverage on your non-precious copings:

Bond strength between ceramic and non-precious coping / framework is increased multifold; highly recommended in situation where clearance is minimal. Most important are its biological properties: - As the metal below ceramic is gold (99.99% pure) coated; it becomes times more bio-friendly when compared to any non precious prosthesis. Applicable to any PFM variant.

Ceramic on Precious and Semi-Precious Frameworks:

For those of our clients who insist on using the noble metal and its analogue. We use best possible gold from the top companies, and it carries the certificate of purity, which makes it equal to the market value of Gold on that day. Charged to you on grammage, on and above the fabrication charges.

All Ceramic / Metal free Ceramics in the anterior/ aesthetic Zone

IPS e-max veneers, single crowns and 3 unit bridges. Fabricated by pressing e-max press ingots to form the sub-structure which is layered using E-max Ceram porcelain. Prepared using standard build up technique and layered using "Professional" powder and techniques as variants seen in the Metal-Ceramic options.

Zirconia:

Zirconium oxide based All-Ceramic Restorative options. Stronger than Metal-Ceramic, as aesthetic as all ceramic. Recommended for the posterior/back teeth which bear the strong biting forces. The restorations are fabricated from sintered frameworks, milled out of Zirconium-Oxide-YTZP crystals complex and then sintered to accurate fit and strength. Options include Procera and Cera-Mill. Possibilities include Single Crowns, Multiple unit Bridges, Full arch restorations to be used with on Implants or natural teeth. The frameworks/ substructures are layered using Nobel-Rondo or E-Max Ceram.

CONSIDERING DENTAL IMPLANTS?

For many years man has tried to find answer to the complex problems associated with tooth loss. Many have even dreamed of replacing missing teeth with alternatives that feel, look and function like natural teeth.

Dental Implants make that dream come true.

Implants can be used for

- ☑ Single tooth replacement
- ☑ Two or more teeth to be replaced
- ☑ Immediate function implants; sutureless, flapless implant surgeries.
- ☑ "Tooth in an hour" concept
- ☑ Full mouth implant reconstruction

Denture stabilizing implants- patients with rocking, ill fitting dentures can walk out of our clinic with stable dentures in just one clinical appointment. A 3 hour single sitting procedure changes your life from "ill-fitting-dentures" to "dentures-snugly-retained-on-mini-implants"

Traditional complete dentures

For all you people who are just comfortable with complete dentures to restore your smile; we offer you a wide range of materials to choose from.

Cast Partial Dentures

The metal frame work present here gives your denture good stability and distributes biting force uniformly.
